

A box plot showing the distribution of 'type' (medical, financial, legal) for 'age' groups (18-24, 25-34, 35-44, 45-54, 55-64, 65-74, 75+). The y-axis represents 'age' from 18 to 75. The x-axis represents 'type'. The plot shows that for each age group, there are data points across all three types, with the highest density of points in the 35-44 age group.
